

M11 Recessed Motion Sensor

Recessed Motion Sensor, Microwave Sensor with Remote Control, 1-10V dimmable control

The Kosnic Microwave Sensor with Remote Control is an energy-saving solution that enables the use of light only when and where you need it. The sensor can be flush mounted to automatically control several 1-10V dimmable luminaires. Along with standard presence and ambient light sensing functions, the sensor offers daylight harvesting (remote control required) and stand-by dimming. The sensor may be set using the DIP switches or by using the optional remote control. The remote control also offers manual override functions.
